Attn:

Dear Sir:

We have been and are continuing to be concerned regarding the visual and aural impact of your visitor's center on this community and particularly the homes on Savile Lane.

Two years ago we addressed this problem to the National Capitol Planning Commission and your agency. We were advised that the "final plans in the second bid package will include considerable additional landscaping in the more sparsely wooded area just east of the visitors center site" and "this should further reinforce the screening of the visitors center activities from the Savile Lane homes".

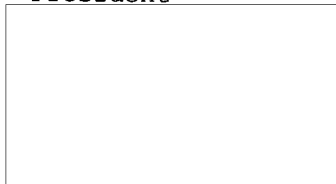

I testified before the commission during the review of Bid Package No. 2 on June 28, 1984 relative to this problem and was again assured by the NCPC and the CIA representatives that adequate screening would be provided around the visitors center.

Construction of the visitors center is now underway. Please advise me specifically as to what additional screening will be provided at the visitors center to minimize the visual and aural impact of this facility on the Savile Lane homes directly to the east of it.

Sincerely,

Eugene L. Kilcullen
President
